

AI Readiness Scorecard

Score Your Business and Identify the Best Next Step for AI Adoption

A Self-Assessment Tool from Lake Tahoe Online (LTOL)

How to Use This Scorecard

This scorecard evaluates your business across five dimensions of AI readiness. For each statement, rate your organization on a scale of 1–5:

- **1** = Not at all / We haven't started
- **2** = Minimal / Just beginning
- **3** = Moderate / Some progress made
- **4** = Strong / Well-established
- **5** = Excellent / Fully mature

Be honest — this tool is for your benefit, not for show. An accurate assessment leads to better recommendations.

Dimension 1: Data Readiness

AI runs on data. The quality, accessibility, and organization of your business data determines what AI can do for you.

#	Statement	Score (1–5)
1.1	Our customer data is stored in a centralized system (CRM) rather than scattered across spreadsheets, email, and paper	
1.2	Our data is clean — minimal duplicates, consistent formatting, and regularly maintained	
1.3	We have at least 12 months of historical data for key business processes (sales, support, marketing)	
1.4	Our data is structured and categorized (tagged, labeled, organized by type)	
1.5	We can easily export or access our data via APIs or integrations	
1.6	We have documented what data we collect, where it lives, and who owns it	
1.7	Our data collection processes are consistent (same fields, same formats, same standards)	
1.8	We track customer interactions across multiple touchpoints (website, email, phone, in-person)	

Dimension 1 Total: _____ / 40

What Your Score Means

Score	Readiness Level	Recommended Action
32–40	Data-Ready	You can implement AI tools immediately
24–31	Nearly Ready	Minor cleanup needed before AI adoption
16–23	Foundation Building	Invest 2–3 months in data organization first
8–15	Starting Point	Begin with CRM implementation and data centralization

Dimension 2: Workflow Maturity

AI automates and enhances existing workflows. If your processes aren't defined, AI has nothing to improve.

#	Statement	Score (1–5)
2.1	Our key business processes are documented (even if informally)	
2.2	We can identify which tasks are repetitive and follow predictable patterns	
2.3	We have clear handoff points between team members and departments	
2.4	We measure the time and cost of our key processes	
2.5	We have already automated some tasks (even simple ones like email rules or form notifications)	
2.6	Our team follows consistent procedures rather than ad-hoc approaches	
2.7	We can identify bottlenecks and inefficiencies in our current workflows	
2.8	We have a process for evaluating and adopting new tools	

Dimension 2 Total: _____ / 40

What Your Score Means

Score	Readiness Level	Recommended Action
32–40	Process-Ready	AI can enhance your existing workflows immediately
24–31	Well-Structured	Document remaining processes, then implement AI
16–23	Developing	Focus on process documentation and basic automation first
8–15	Ad-Hoc	Start by mapping and standardizing your core workflows

Dimension 3: Team Readiness

AI adoption requires people who are willing to work alongside AI tools and adapt their workflows.

#	Statement	Score (1–5)
3.1	Our team is generally comfortable adopting new technology	
3.2	Leadership is supportive of AI exploration and investment	
3.3	We have at least one person who could champion AI adoption internally	
3.4	Our team understands the basics of what AI can and cannot do	
3.5	We have a culture of continuous improvement and experimentation	
3.6	Our team is open to changing how they work if it improves outcomes	
3.7	We invest in training and professional development regularly	
3.8	We have the capacity (time and attention) to implement new tools without overwhelming the team	

Dimension 3 Total: _____ / 40

What Your Score Means

Score	Readiness Level	Recommended Action
32–40	Team-Ready	Your people will embrace AI tools enthusiastically
24–31	Mostly Ready	Invest in education and start with low-risk pilots
16–23	Cautious	Build awareness gradually; start with tools that save obvious time
8–15	Resistant	Address change management before introducing AI tools

Dimension 4: Technology Infrastructure

AI tools need to connect to your existing systems. Your infrastructure determines how easily AI can access data and deliver results.

#	Statement	Score (1-5)
4.1	Our core business systems are cloud-based (not local-only software)	
4.2	Our systems can integrate with each other (APIs, native integrations, or Zapier/Make)	
4.3	We have reliable, fast internet connectivity	
4.4	Our security posture is solid (MFA, endpoint protection, backups)	
4.5	We have a technology budget that includes room for new tools	
4.6	Our current software is up to date (not running legacy/end-of-life systems)	
4.7	We have IT support (internal or external) that can help implement new tools	
4.8	Our systems have proper user access controls and permissions	

Dimension 4 Total: _____ / 40

What Your Score Means

Score	Readiness Level	Recommended Action
32-40	Infrastructure-Ready	Your tech stack can support AI tools today
24-31	Mostly Ready	Address specific gaps (integrations, security) then proceed
16-23	Needs Upgrades	Modernize core systems before adding AI layer
8-15	Legacy Environment	Prioritize infrastructure modernization as prerequisite

Dimension 5: AI Opportunity Identification

The best AI investments solve real business problems. This dimension assesses whether you've identified clear opportunities.

#	Statement	Score (1–5)
5.1	We can name specific tasks that consume too much employee time	
5.2	We have identified areas where human error causes problems	
5.3	We know which customer interactions could be faster or more consistent	
5.4	We can quantify the cost of our current inefficiencies (hours, dollars, missed opportunities)	
5.5	We have specific KPIs that AI could improve (response time, conversion rate, throughput)	
5.6	We've researched AI tools relevant to our industry or function	
5.7	We can articulate what “success” looks like for an AI implementation	
5.8	We have a realistic timeline and budget expectation for AI projects	

Dimension 5 Total: _____ / 40

What Your Score Means

Score	Readiness Level	Recommended Action
32–40	Opportunity-Clear	You know exactly where to start — execute now
24–31	Mostly Clear	Refine your priorities and build a business case
16–23	Exploring	Spend time identifying and quantifying specific opportunities
8–15	Undefined	Start with a discovery workshop to map possibilities

Overall Readiness Score

Add your five dimension totals:

Dimension	Your Score
1. Data Readiness	_____ / 40
2. Workflow Maturity	_____ / 40
3. Team Readiness	_____ / 40
4. Technology Infrastructure	_____ / 40
5. AI Opportunity Identification	_____ / 40
TOTAL	_____ / 200

Your AI Readiness Level

Total Score	Level	What It Means
160–200	AI-Ready	You’re in an excellent position to implement AI immediately. Focus on selecting the right tools and executing quickly.
120–159	Nearly Ready	You have a strong foundation with some gaps to address. A focused 30–60 day preparation phase will set you up for success.
80–119	Building Foundation	You have the right intentions but need to strengthen your foundation. Focus on data, processes, and infrastructure for 2–3 months before AI adoption.
40–79	Early Stage	AI is premature for your current state. Invest in modernizing your core business systems first — CRM, cloud migration, process documentation. AI will follow naturally.

Recommended Next Steps by Level

If You Scored 160–200 (AI-Ready)

1. Choose your first AI project based on highest ROI potential
2. Set a 30-day implementation timeline
3. Define success metrics before you start
4. Plan for team training alongside deployment
5. Book a strategy session to accelerate implementation

If You Scored 120–159 (Nearly Ready)

1. Identify your weakest dimension and address it first
2. Clean up your CRM data (if Data Readiness was low)
3. Document your top 5 workflows (if Workflow Maturity was low)
4. Run an AI awareness session for your team (if Team Readiness was low)
5. Upgrade legacy systems (if Infrastructure was low)

If You Scored 80–119 (Building Foundation)

1. Implement or clean up your CRM as priority one
2. Move to cloud-based systems where possible
3. Document your core business processes
4. Establish basic automation (email rules, form notifications, task assignments)
5. Build team comfort with technology change through small wins

If You Scored 40–79 (Early Stage)

1. Start with the basics: reliable email, file storage, and a simple CRM
2. Ensure security fundamentals are in place (MFA, backups, endpoint protection)
3. Begin documenting how work gets done in your organization
4. Invest in team technology literacy

5. Set a 6-month goal to reassess readiness

Dimension Gap Analysis

Your lowest-scoring dimension is your biggest bottleneck. AI readiness is limited by your weakest link:

- **Low Data Readiness** → AI has nothing to work with. Fix this first.
 - **Low Workflow Maturity** → AI has nothing to automate. Document and standardize processes.
 - **Low Team Readiness** → AI tools won't be adopted. Invest in education and change management.
 - **Low Infrastructure** → AI tools can't connect. Modernize your tech stack.
 - **Low Opportunity ID** → You'll invest in the wrong things. Spend time on discovery.
-

Next Steps

1. **Take our interactive AI Readiness Assessment** at ltol.com for a more detailed analysis with personalized recommendations.
 2. **Download the Small Business AI Playbook** for a complete implementation guide.
 3. **Book a Strategy Session** to discuss your score and build a roadmap tailored to your business.
